GOJAK™ AUTOMOTIVE POSITIONING SYSTEM

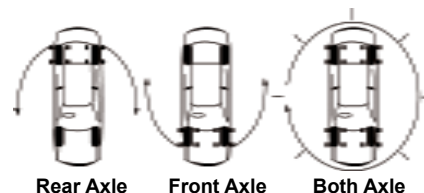

Ideal For Body Shops, Towing Companies, New Car Showrooms, Mechanical Shops, Parking Garages, Classic Cars

How Does A Gojak Work?

The quick action double pawl ratchet progressively “squeezes” the tire between two rollers until the tire is lifted off the ground. Once all four tires are off the ground, the vehicle can be positioned anywhere in the shop.

Two Gojaks allow you to pivot any car on either axle. Four gojaks give you full dolly style maneuverability.

- 4 swivel, NON-marring full swivel industrial casters - Will not mark showroom floors.
- Precise ratchet mechanism
- Full control for vehicle movement and positioning

All models are priced and sold by the unit
